KENYA MARINE AND FISHERIES RESEARCH INSTITUTE

Commercial & Enterprise *Services Hub*

The public services website and its administration dashboard — what it offers clients, how staff manage requests, and how it is built.

Part 1 · Public website

Part 2 · Administration dashboard

Part 3 · Platform & next steps

AT A GLANCE

One hub for KMFRI's *commercial services*

Clients find services, tariffs, laboratories and research stations, then request a formal quotation. Staff track every request from receipt to fulfilment.

10

Enterprise services

Laboratory testing, consultancy, aquaculture seed, marine data, vessel hire, value addition, tours, training, facilities and attachments.

35

Published tariffs

Official fee tiers with units and turnaround times, read live from the services database.

8

Research stations

Marine and freshwater centres with facilities, services delivered, heads of station and contacts.

3

Laboratory networks

Ocean & Coastal, Freshwater and Aquaculture laboratories, with content taken from kmfri.go.ke.

Public website · /enterprise

kmfri.go.ke design, desktop and mobile, live search, online quotation requests with an official reference number.

Administration dashboard · /admin/kmfri

KPIs, inquiry workflow with audit trail, catalogue, user management, activity log and settings — behind staff login and roles.

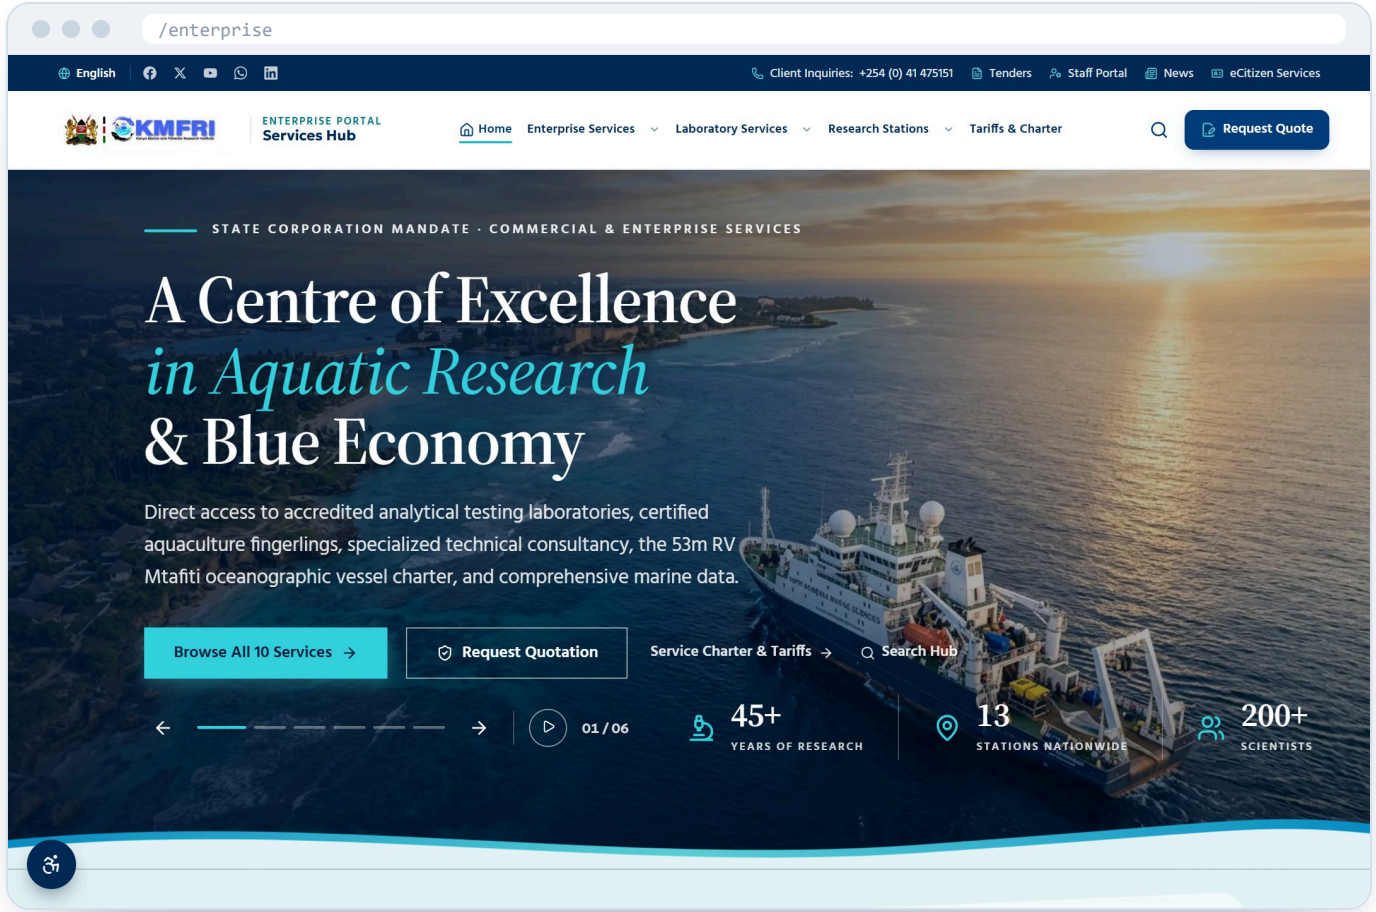

PART 1

The public *website*

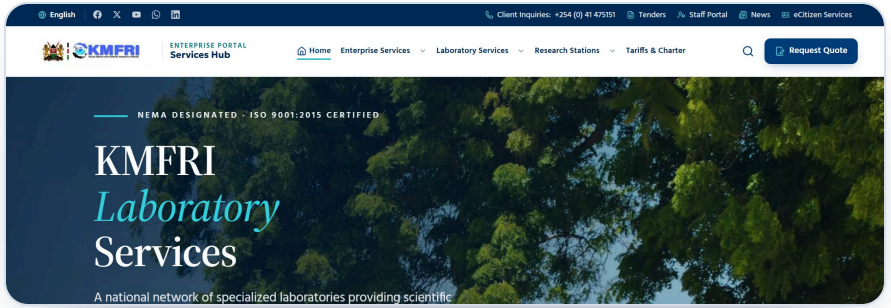

What clients see at **/enterprise**: navigation, services, laboratories, stations, the service charter and online quotation requests.

PUBLIC WEBSITE

Home page & *hero tabs*

- **Six hero slides** with tab controls, autoplay, pause, keyboard arrows and swipe; motion stops for visitors who prefer reduced motion.
- **Laboratory Services slide** links straight to the new laboratories page.
- Below the hero: client sectors, flagship services, the full catalogue, quality credentials and research stations.
- The KMFRI announcement strip, social links, hotline and eCitizen links carried over from kmfri.go.ke.

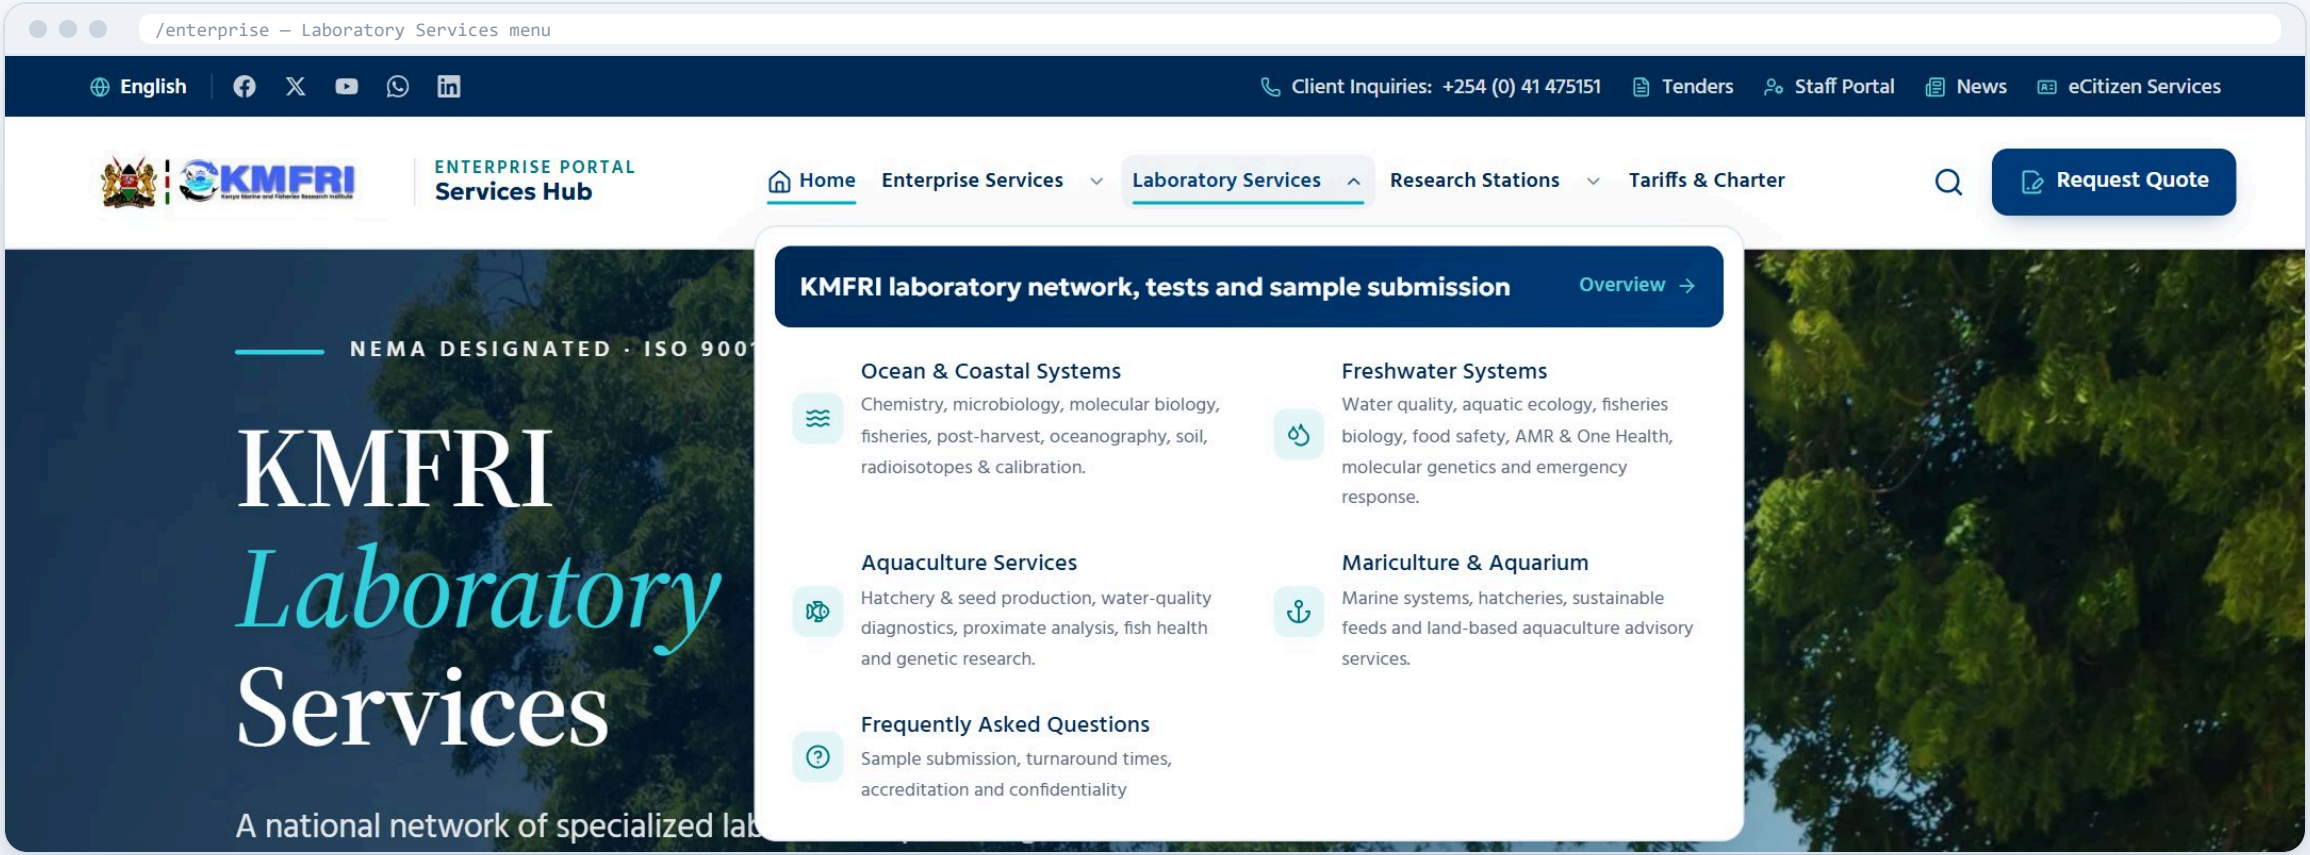

Hero tab 6 — Laboratory Services

PUBLIC WEBSITE

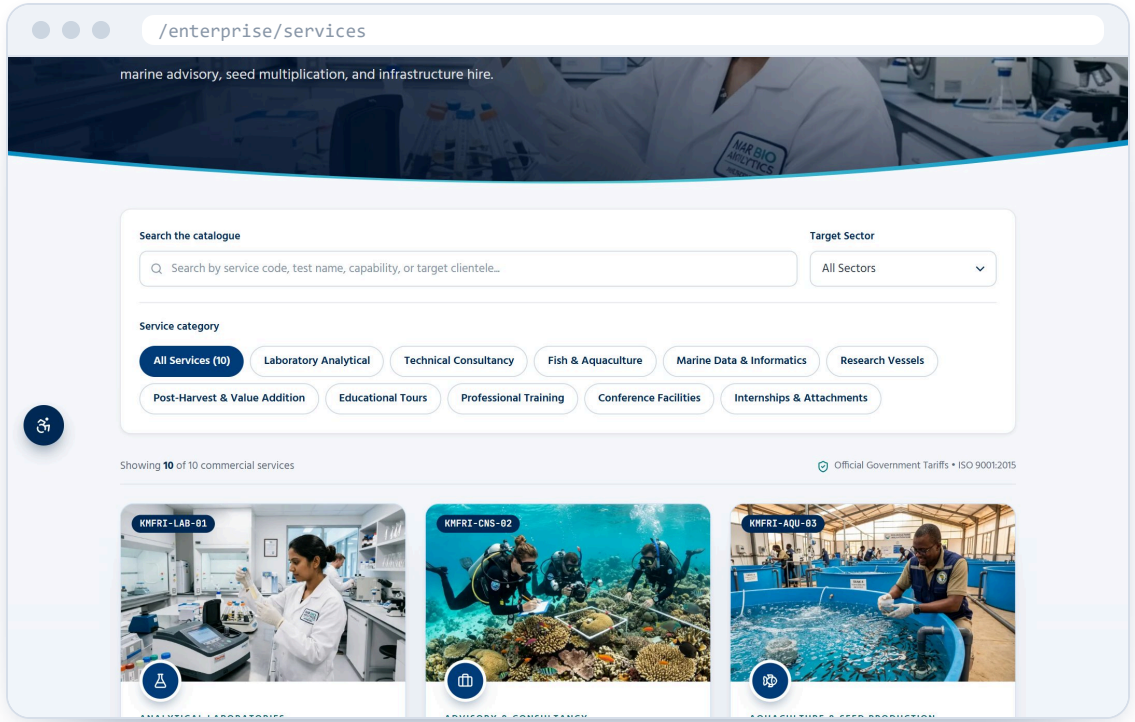

Navigation with a dedicated *Laboratory Services* tab

Home · Enterprise Services · **Laboratory Services** · Research Stations · Tariffs & Charter. The menu is Drupal's main menu, so editors can reorder or rename it without code.

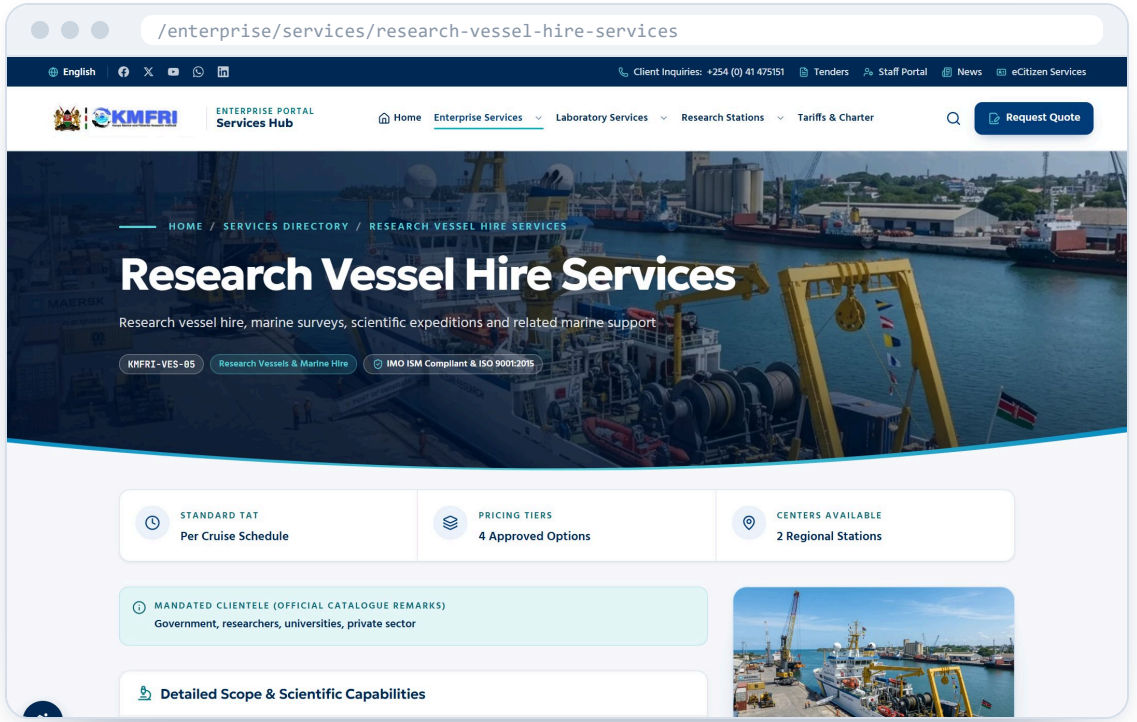

PUBLIC WEBSITE

Services directory & *service pages*

- **Filter** by keyword, client sector and category — instantly, and the filtered view has a shareable link.

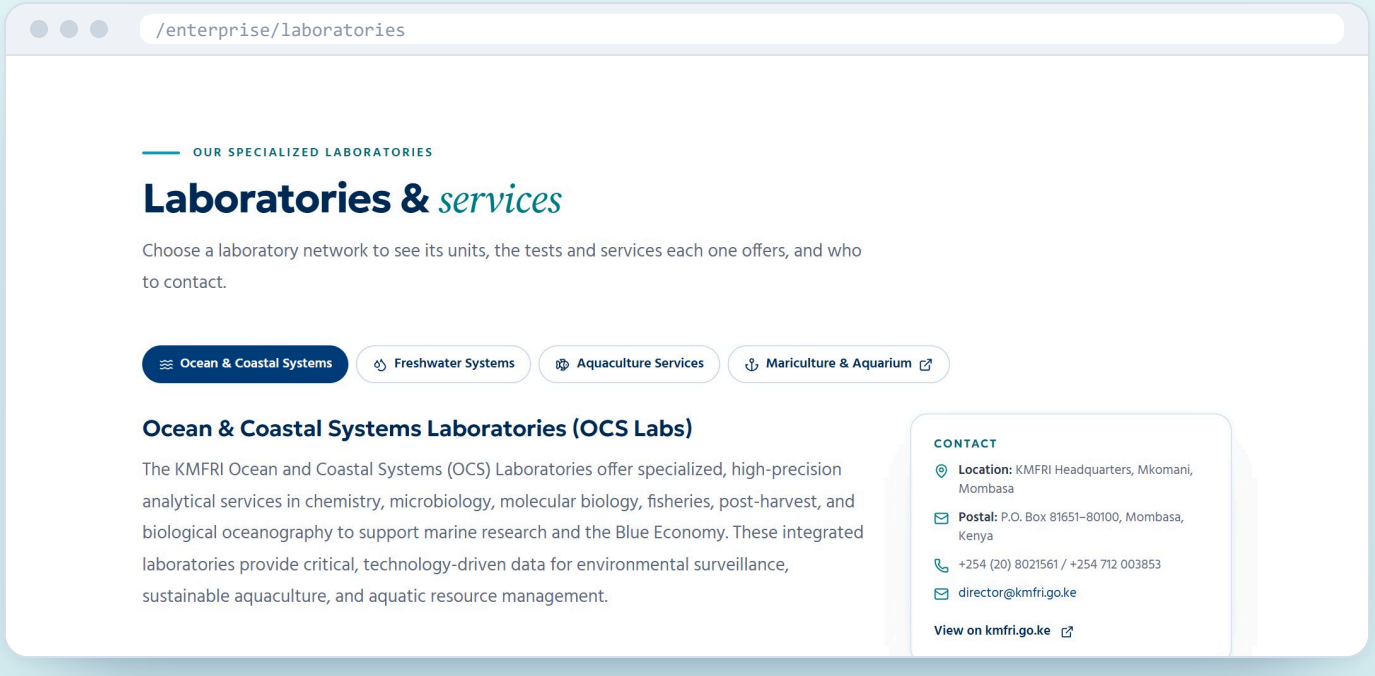

- **Each service:** scope, approved tariffs (KES/USD), research fleet or dataset tables, client requirements, centres and the responsible officer.

PUBLIC WEBSITE

Laboratory *Services*

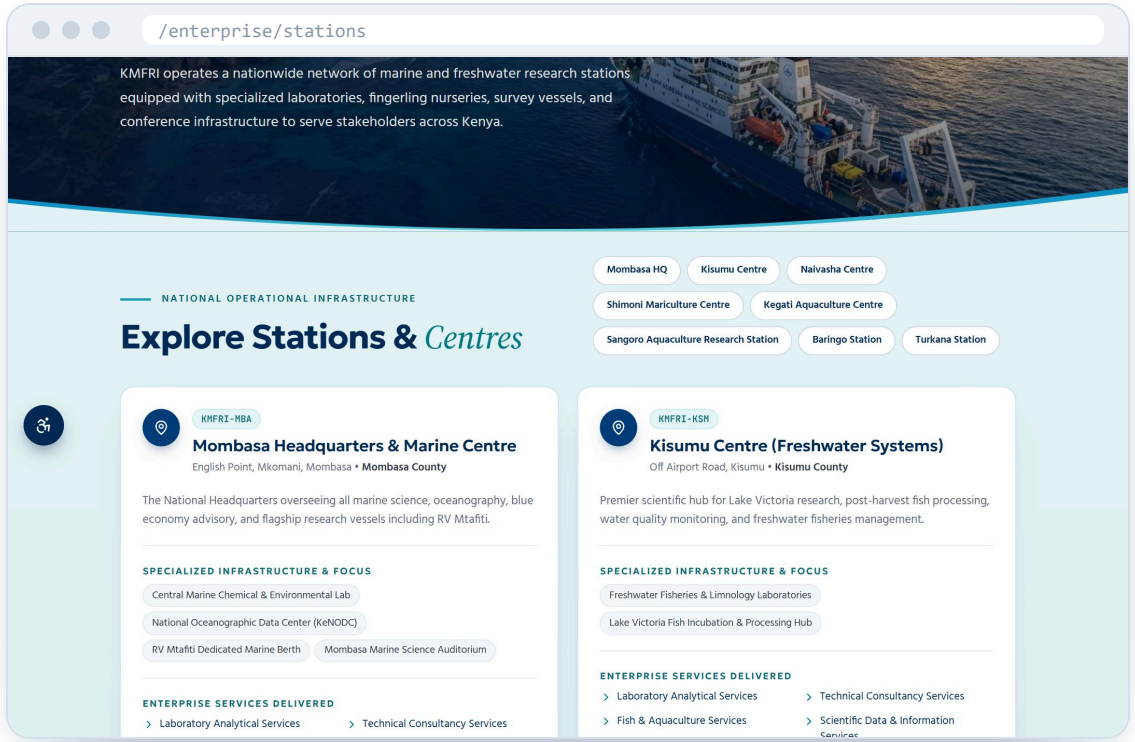

- **Accreditation:** ISO 9001:2015 certified, NEMA designated, ISO/IEC 17025:2017 in progress.
- **Three laboratory networks** as tabs — 24 laboratory units with their tests and services, applications, and contacts.
- **Equipment gallery** with the official KMFRI photographs.
- **20 FAQs**, sample submission form (PDF) and Laboratory Services contacts.
- Content sourced from **kmfri.go.ke/infrastructure/laboratories**.

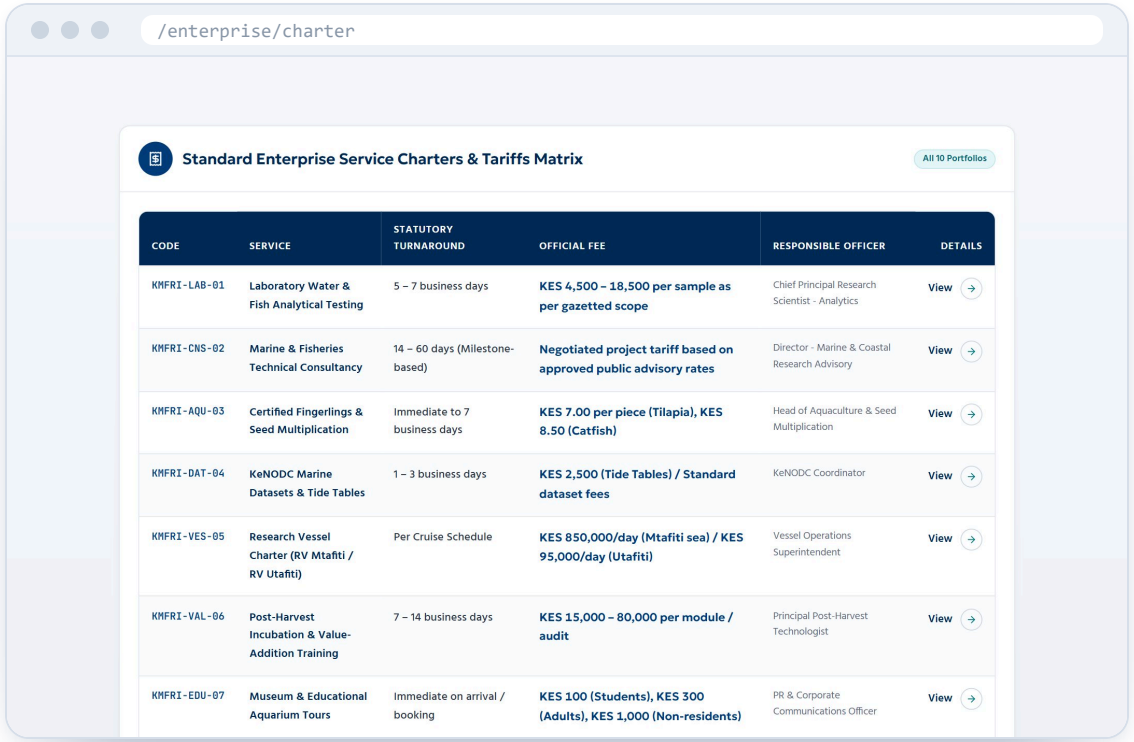

PUBLIC WEBSITE

Research stations & *service charter*

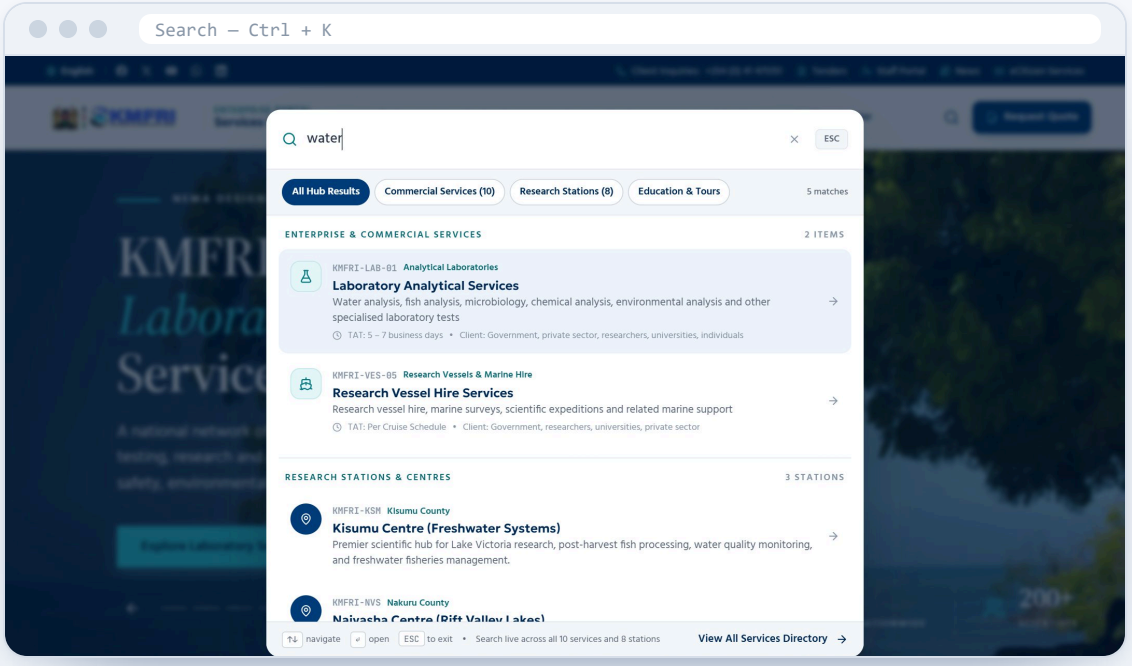

8 stations: facilities, services delivered, head of station, phone, email and a map link.

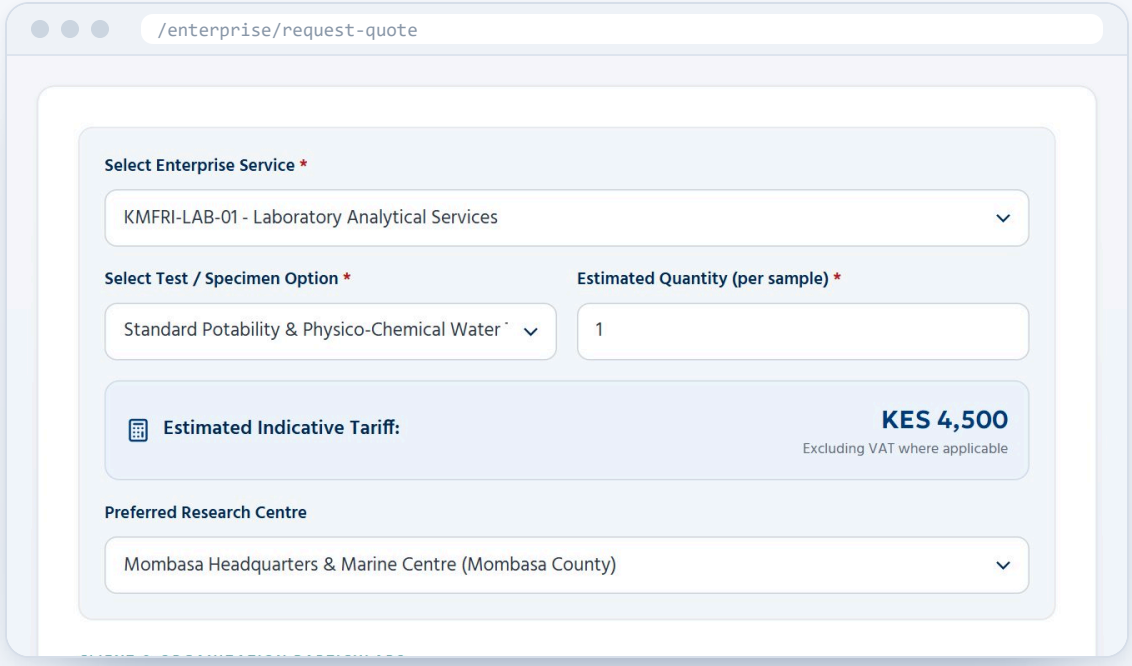

Citizens' service charter: statutory turnaround, official fee, responsible officer and redress channel.

PUBLIC WEBSITE

Search & online *quotation requests*

Live search across all services and stations, with filters and keyboard navigation.

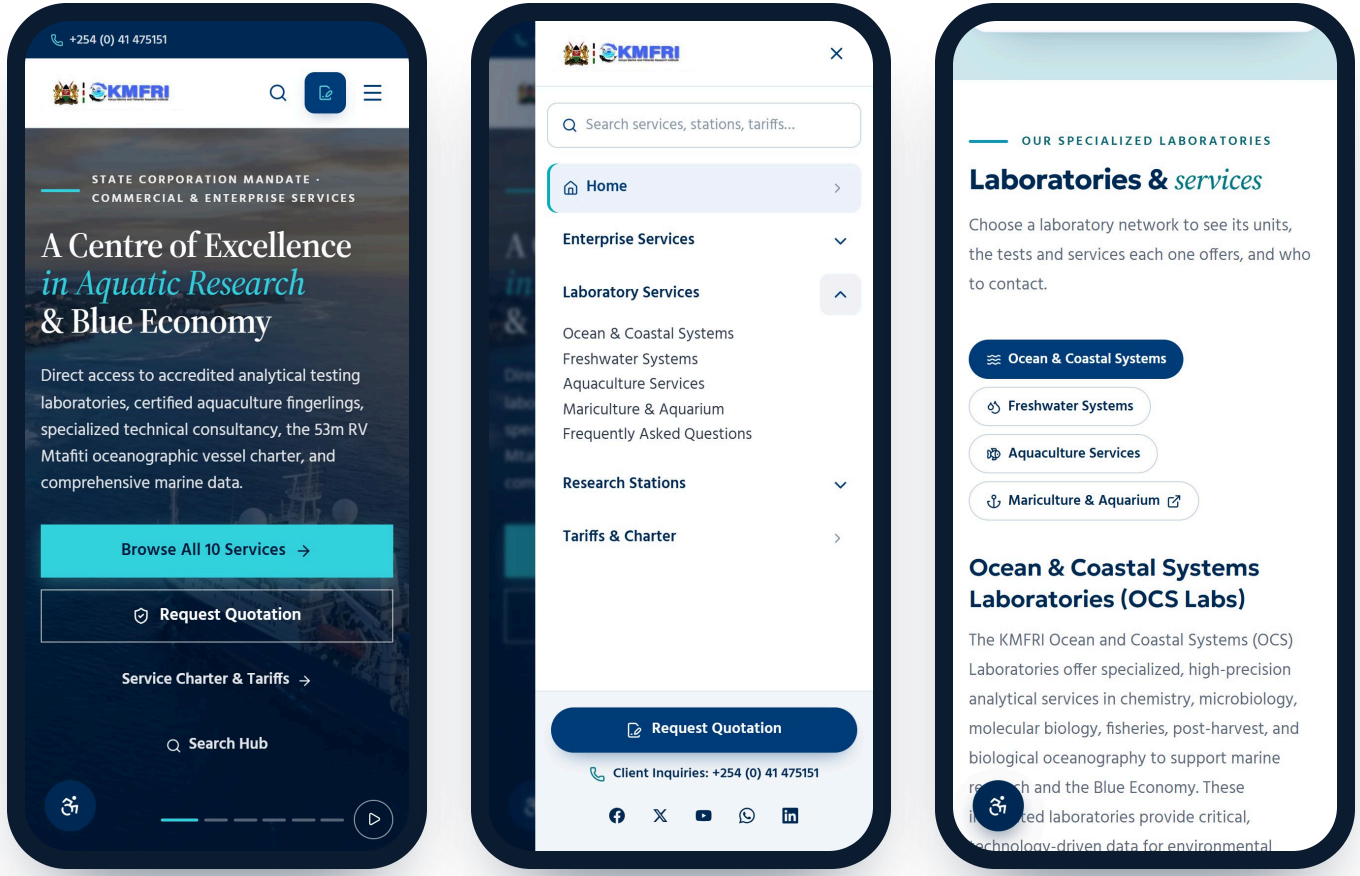

- Tariff options follow the chosen service; the **indicative fee** updates as the quantity changes.
- Server checks on every field (e.g. KRA PIN format), spam limits, and an official **KMFRI-SRV reference** on submission.

PUBLIC WEBSITE

Built for *phones* too

- **Responsive layouts** on every page — no sideways scrolling, verified at phone and desktop widths.
- **Slide-out menu** with the same sections, including Laboratory Services and its five links.
- **Accessible:** skip links, keyboard support, screen-reader labels, visible focus and reduced-motion support.
- **Works if the database is down:** pages fall back to a bundled catalogue and the quote form shows the hotline instead.

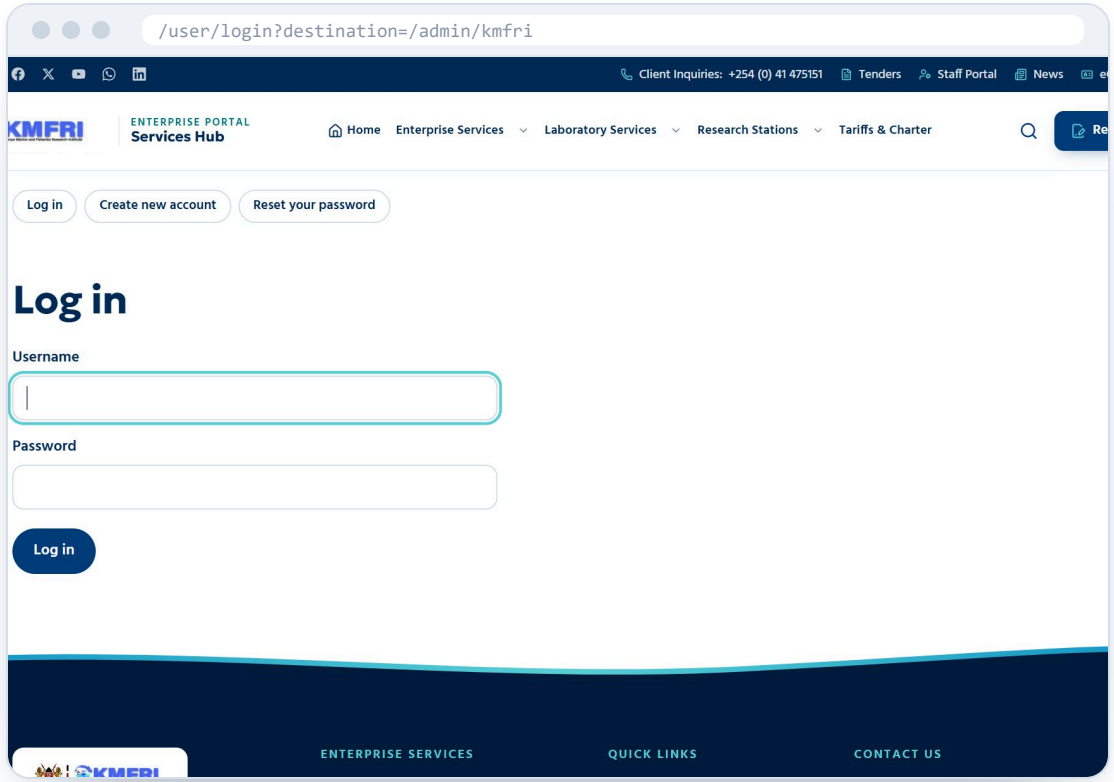

PART 2

The administration *dashboard*

What staff use at **/admin/kmfri**: KPIs, the inquiry workflow, the catalogue, users, activity and settings.

ADMINISTRATION

Secure staff access & *roles*

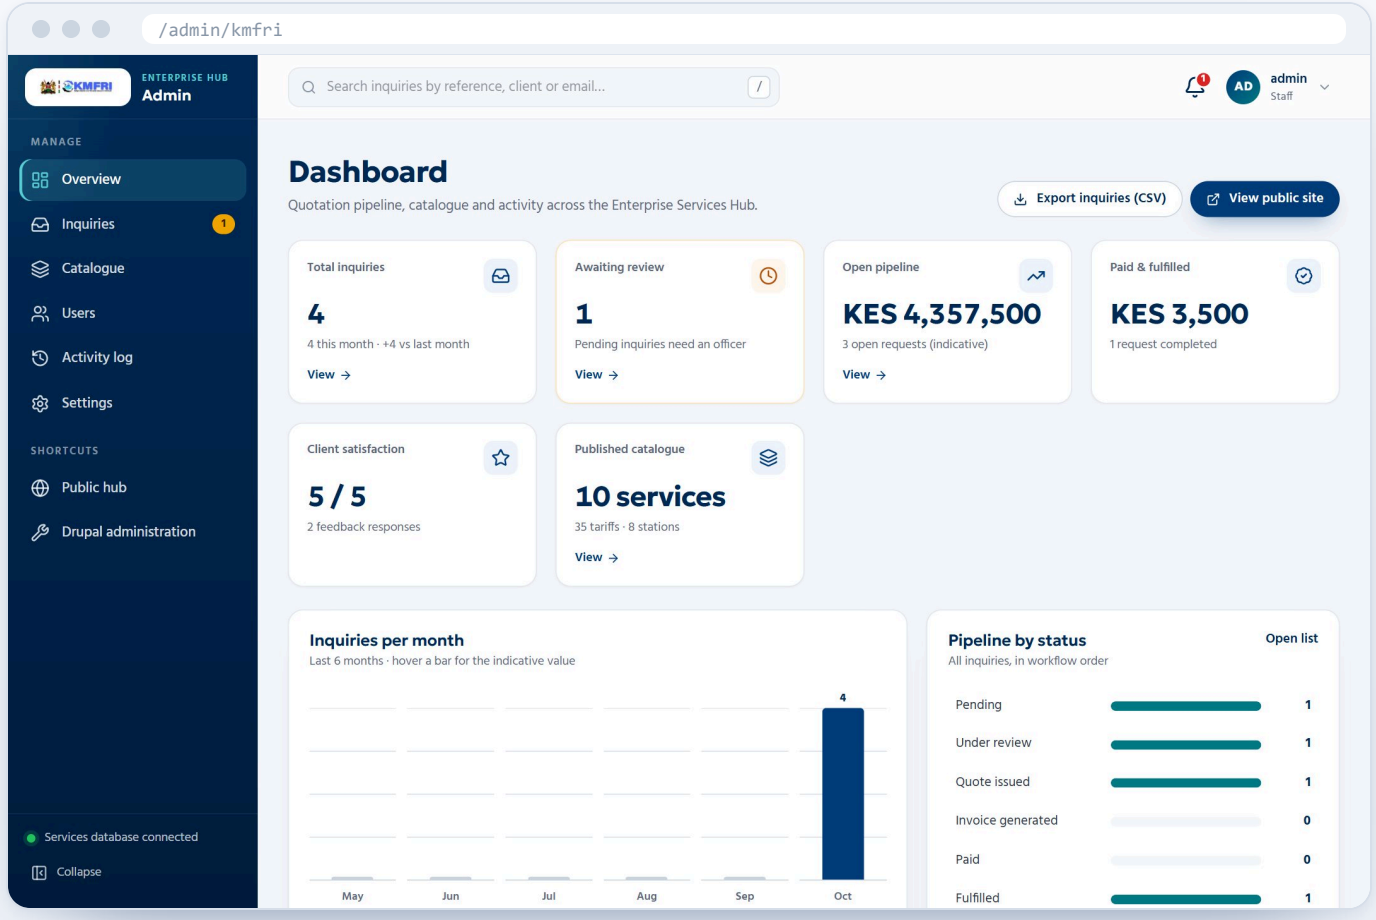

Logged-out staff are sent to the login page, then back to the page they asked for.

CAN…	HUB VIEWER	HUB MANAGER	ADMINISTRATOR
See dashboard, inquiries, catalogue, activity	✓	✓	✓
Change inquiry status	—	✓	✓
Export inquiries (CSV)	—	✓	✓
Manage users & roles	—	—	✓
Settings & catalogue reload	—	—	✓

Built on Drupal users, roles and permissions; menu items a user cannot open are hidden, and direct links return "access denied".

ADMINISTRATION

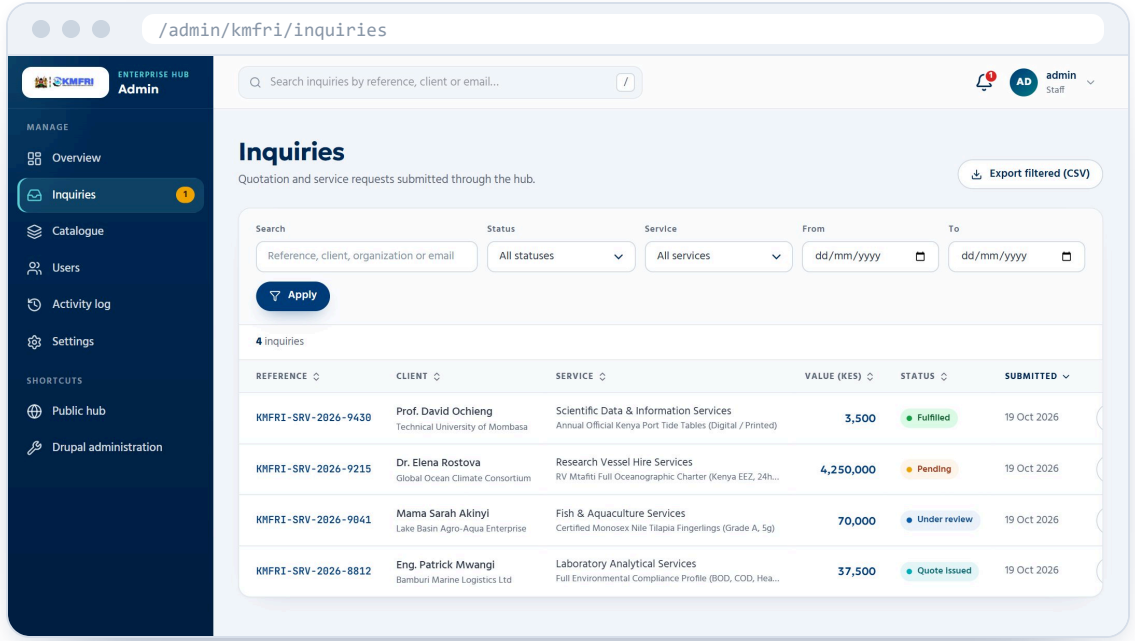

Dashboard *overview*

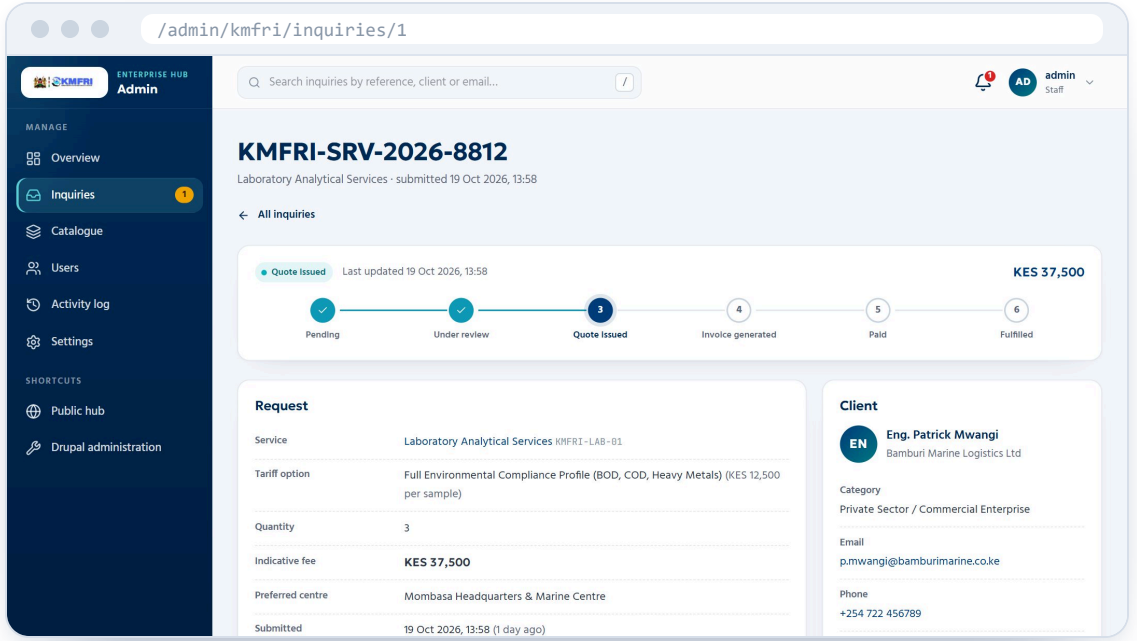

- **Six KPIs:** total inquiries vs last month, awaiting review, open pipeline value, paid & fulfilled value, client satisfaction, catalogue size.
- **Charts:** inquiries per month, pipeline by status, most-requested services — every value also shown as text.
- **Latest inquiries** and **recent activity**, each one click from the full record.
- Sidebar with pending-request count and database status; collapses on desktop, slides out on phones.

ADMINISTRATION

Managing *inquiries*

Search; filter by status, service and date; sort any column; page through results; export the filtered list to CSV.

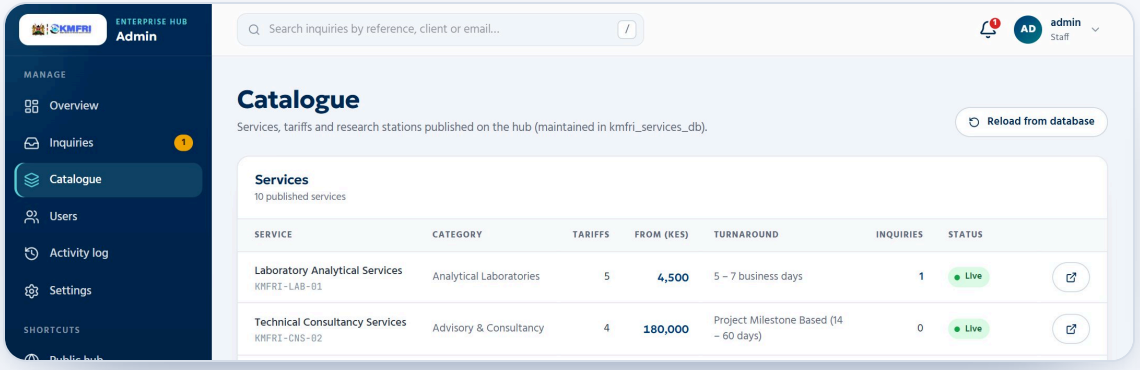

Progress tracker, request and client details, audit trail and the status update form.

Pending → **Under review** → **Quote issued** → **Invoice generated** → **Paid** → **Fulfilled**

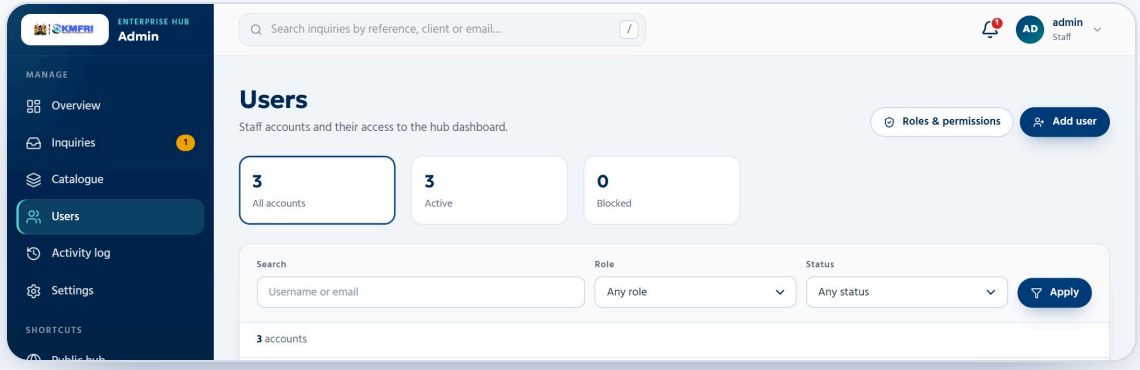

or **Cancelled** (reason required) — every change is recorded with officer, time and remarks.

ADMINISTRATION

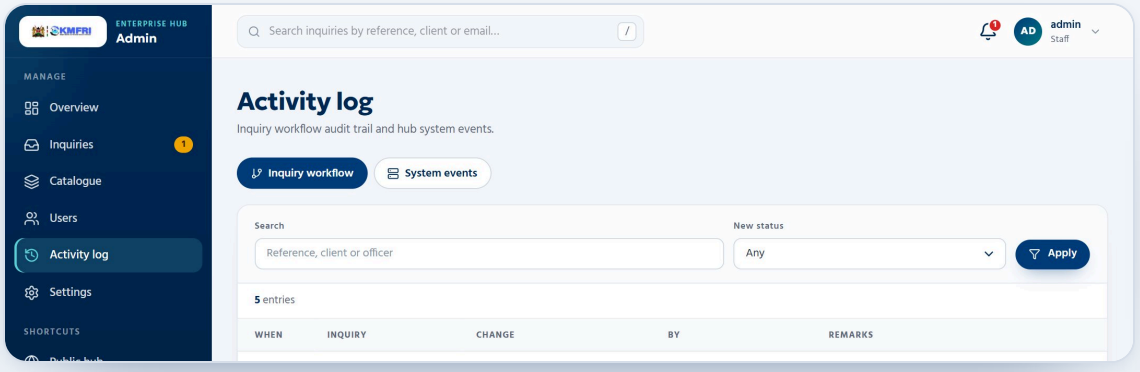

Catalogue, users, activity & *settings*

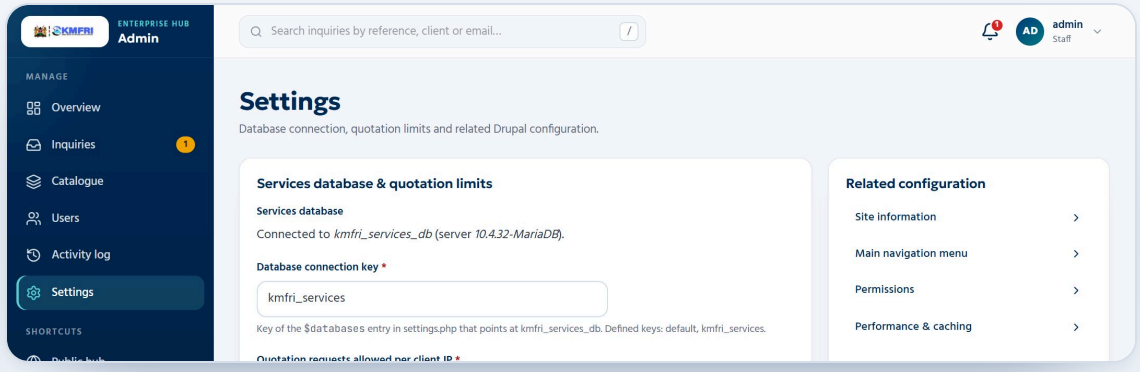

Catalogue — services with tariffs, starting price and demand; stations; one-click reload from the database.

Users — search and filter accounts; bulk block, unblock, add or remove hub roles (you can't lock yourself out).

Activity log — the inquiry audit trail plus system events: exports, user changes, reloads, logins.

Settings — database connection status, quotation limits and links to related Drupal configuration.

PART 3

Platform, security & *next steps*

1

Platform

Drupal 10.3+ / 11 module and theme in PHP 8.1+, MySQL/MariaDB database *kmfri_services_db,* Drush setup command, read-only JSON API. Fits alongside kmfri.go.ke, which also runs on Drupal.

2

Security & quality

Least-privilege database account (read + approved procedures only), workflow rules enforced in the database, role-based access, spam limits on the quote form, spreadsheet-safe exports. Tested end to end on Drupal 10.6.

3

Suggested next steps

Deploy to a staging server with real staff accounts · review content and tariffs with each division · test on Drupal 11 (needs PHP 8.3) · decide whether public account sign-up should be switched off · email notifications for new requests (not yet built).
